To edit: Retouch photos Edit photos quickly Photoshop has several powerful editing features that will enable you to make your photos look more professional than ever. Using PhotoShop Elements you can edit your photos quickly and easily. To make your photos look better, you need to use the most powerful editing tools. Here are a few of the powerful editing features available with Photoshop. Retouch photos You can make your photos look more professional by applying the latest digital retouching techniques. Retouching is the process of altering the appearance of an image to bring out more natural qualities. You can retouch images using the following steps. 1. Select an editing tool. 2. Pick an area of the photo that you want to edit. 3. Select an area of the photo to edit. 4. Apply the retouching technique to the photo. Let's show you how you can modify a photo of a dog using the Filter -> Brush tool. Select Filter -> Filter, and then the Brush tool to open the Brush tool options. Choose a brush with appropriate size, hardness and opacity. Apply a soft, slightly blurred brush with opacity of about 70% to the background of the photo. Now apply the Clone Stamp tool to remove the blemishes from the dog's face. The new parts of the dog will be replaced by the original parts of the dog. Apply a Gaussian Blur effect to the dog's eyes. Now apply a Gaussian Blur effect to the entire image. The blur effect will make your dog's eyes look softer and blurrier. Photoshop has many more editing features that will help you enhance the appearance of your photos. PhotoShop Elements offers you the same powerful editing tools as the professional version. Some popular brushes include Airbrush, Pencil, Eraser, and Sponge to name a few. It's always good practice to practice creating your own brushes. You can use the Brush Tool to create new brushes and modify existing ones. For more information, see Make a new custom brush in Photoshop. 2. Effects Effects are a type of filter that can be applied to photos, text, or layers. They can be used to create cool effects like fizz, swirl, blur, and glass. They are also used to create a variety of other things like bevels, patterns, textures, drop shadows, perspective and more. Some popular effects include Glare, Grain, Gradient, Tile, Hue-Saturation, Drop Shadow, and Glow. You can access the effects that you have installed in Photoshop under Edit > Effects > Develop Module > Filter Gallery. 3. Textures Textures are interesting because you can use them to create distinctive visual effects that are often very difficult to produce in real life. For example, you can use textures to set a watercolor-type look on your textures. You can use any kind of image or shape to be a texture. Photoshop CS4 includes two new options, known as a Grab and Mask. You can also make your own textures. You can use this method to make new ones or modify an existing one. The process for making new ones is described in detail in Make a new custom brush in Photoshop. 4. Shadows Shadows are probably one of the most recognizable and useful Photoshop features. You can create a light or dark shadow by choosing a blur tool (like the Blur Tool or Gaussian Blur Tool) or making a selection and using the Shadow or Burn tools. The two most common types of shadows are Single Shadow and Multiple Shadow. To make a Single Shadow, select a part of your image and blur the edges with the blur tool. To make a Multiple Shadow, first create a selection that defines the areas where you want your shadow to be created. Then use the Shadow or Burn tools to create multiple shadows. You can use the layer mask to easily blend the effects into your image. 5. Thresholds and Masks Thresholds and Masks are used to make selections of specific areas of an image. You can use the Threshold tool for non-destructive selections or the Threshold Mask tool for destructive selections. The Threshold tool

An incremental approach to the diagnosis of congenital bronchogenic cyst, using computed tomography and fine-needle aspiration cytology: a case report and literature review. Congenital cysts of the lung are divided into three types: septated, non-septated and thin walled. The septated cyst has a much better prognosis. So are thin walled cysts, detected as a pneumatocele, where imaging is not available. A case of septated congenital cyst of the lung detected by CT and confirmed by fine-needle aspiration cytology (FNAC) and surgery is reported. A 5-year-old boy, presented with right-sided abdominal swelling. A huge right lower lobar cystic mass was detected by chest CT, and fine-needle aspiration cytology (FNAC) was performed. Tumour markers (CEA and CA-125) were non-informative. The patient underwent right thoracotomy with lobectomy. Histopathology confirmed a septated bronchogenic cyst. The resected specimen showed a tan walled cystic lesion in the right upper lung lobe. The patient had no recurrence for 12 months.
