As for the others - they are free, so there's nothing to complain about - but they aren't perfect either. A: With respect to splitting audio, I use X-Rite's SpectraXpert MP3 Splitter. xMplay also does this fairly nicely and is free. I haven't used it as I prefer to keep things short and sweet with one program. Both are command line based and so might be a bit daunting if you're new to command line apps.
