The unique identifier can be any unique string that can be used to identify a specific object. When the system needs to reference a configuration item, the unique identifier (a

label) is searched for in the configuration data. If the search is successful, the configuration item is retrieved. Otherwise the system reports a configuration item is missing. A Configuration Item is a sub-item in a configuration hierarchy. A Configuration Item is used to store a set of properties, or properties are placed in a Configuration Item. The properties in a Configuration Item are referenced in the configuration
