This is an outcome of the OBSERVE study and is supported by findings from a meta-synthesis of qualitative research from the piloting of the study, which included a large number of consultations with stakeholders. It also reflected the findings of a review of the literature and the interviews conducted as part of a literature review. The process evaluation of OBSERVE will provide insight into the challenges and factors affecting implementation. The qualitative data will be used to provide context for the OBSERVE process evaluation. The broader implementation of the intervention will be assessed through semi-structured interviews with those involved in the implementation. This will allow us to explore both the factors that may affect the implementation and also the impact of the intervention on service delivery. It is anticipated that the data will be analysed using a thematic approach. The OBSERVE pilot study will provide data on the costs and cost-effectiveness of the intervention. This will allow us to further develop the cost-effectiveness framework that is described elsewhere in this supplement \[[@CR43]\]. The preliminary framework will be developed based on the results of the qualitative studies, which will inform a full cost-effectiveness analysis. The main difference between this preliminary framework and the full framework is that the preliminary framework assumes a single implementation period in an HSC, whereas the full framework will take the
