AutoCAD History In the early 1980s, AutoCAD was designed to enable individual CAD operators to work in separate terminal rooms without having to wait for each other to complete a drawing. AutoCAD is the most popular CAD program, used by many in the architectural and engineering community. The first version of AutoCAD ran on Intel i8086, Motorola 68000, or Motorola 68000 -based microcomputers. In 1983, a version of AutoCAD could be run on IBM PC/AT computers, although in 1984 the version of AutoCAD for PC/ATs was dropped and replaced with the Microsoft Windows version, while for the microcomputer versions, Microsoft's XW and DOS were used. By 1983, most CAD programs ran on minicomputers with an internal graphics terminal. These programs were developed by large corporations. AutoCAD was one of the first desktop applications. Before AutoCAD was introduced, each CAD operator (user) had to work at a separate graphics terminal. Before AutoCAD was introduced, CAD programs ran on mainframe computers. Increasing Medicare payment to physicians for surgeries has been based on how much surgery costs to provide. Increasing Medicare payment to physicians for hospital services has been based on the severity of a patient's condition. We calculated the increase in payment that should be paid to physicians in the last 10 years, and we're comparing it to what Medicare paid them before July 1st, 2009. Dr. Feinstein, do you want to go first or is it your turn? DR. JOSEPH FINEENSTEIN: Our time, I think. Dr. Hauser, do you want to go next, or is it your turn? DR. NEIL HAUSER: I'd like to go first. I'm interested in how it was decided that the payment increases should be based on cost, but the payment for hospitals should be based on the patient's condition. It seems like an odd choice to me, but, uh, I guess they came up with it. DR. JOSEPH FINEENSTEIN: So, in the article I cite here that Dr. Hauser cites here, he says that the cost-based increase is premised on two assumptions. First, that the costs of carrying out a surgery have increased. And, second, that those costs are a good proxy for the level of medical service needed to provide that surgery. These assumptions seem like a rather strange bedrock on which to base the proposed increases. How exactly do we know that the costs of providing surgery have increased? They've gone up a lot, and that's the
