On January 22, 2010, a new API was released as part of AutoCAD 2010 named the AutoCAD Application Programming Interface (API) for Dynamics. The API is integrated into AutoCAD 2010 and has been enhanced to include the ability to extract information from the ribbon, to read, write and manipulate objects in the drawing, to browse and filter objects in a database, and to create and read collections. The API can be used in Autodesk Exchange Apps and Autodesk Digital Design apps, or any other third-party app that uses the API. The API is a significant enhancement to the existing user interface for creating and interacting with objects in AutoCAD drawings. AutoCAD also uses standard APIs, including the Graphical User Interface (GUI) API, for interfacing with Windows and other graphical user interface operating systems. AutoCAD's scripting is similar to that of AutoLISP. AutoCAD scripts are used for automating routine tasks, especially for repetitive tasks which can be simplified with a script. AutoCAD is designed to let users enter a specific command and have AutoCAD return the specific information, or perform the specified task. By scripting in AutoLISP, AutoCAD is able to apply an on-the-fly instruction set. AutoCAD supports many scripting languages, including Visual LISP, AutoLISP, Visual Basic, ObjectARX, JavaScript, and others. The US Government uses AutoCAD to design and manufacture some of its products, such as the 2007 F-35 Lightning II fighter aircraft. The U.S. Department of Defense Computer Emergency Readiness Team (US-CERT) reported that they experienced a denial of service attack on July 12, 2011, where more than 11.5 million requests per second were made to AutoCAD servers. The original reason for the attack was suspected of being a virus. However, US-CERT later attributed the attack to a denial of service attack by the hacker known as "The Jester". US-CERT reported that "The Jester" had claimed responsibility for the attack and that the attack was unsuccessful, but that the hackers were able to take over the system and take control of it. "The Jester" also reported that the attack was unsuccessful at getting any information or details on the US-CERT site. AutoCAD uses object-oriented programming. AutoLISP is AutoCAD's main object- ca3bfb1094
