To compare the safety and efficacy of cyclosporine and placebo in patients with severe vernal keratoconjunctivitis (VKC). In a double-masked study, 40 consecutive patients with severe VKC were randomly assigned to receive cyclosporine (3 mg/kg/day) (n = 20) or placebo (n = 20) for 4 weeks. The primary outcome measure was the severity of VKC, as assessed at each visit by the investigator based on conjunctival (for baseline and follow-up) and clinical (for follow-up) signs and symptoms. The mean maximal hyperemia scores on conjunctival biomicroscopy were 0.83+/-0.50 for cyclosporine (range 0.01-2.1) and 1.6+/-0.40 for placebo (range 0.01-4.0) at week 4 (PA at the time of this writing, the Australian government has not announced any plans to build the contentious Islamic mosque in Sydney. However, Islam of the South Pacific version being proposed by Terry Jones could be built in Orange County, California, after all. "Orange County," home of Disneyland, the California Pacific International Airport and the the Great America theme park, boasts eight mosques within its borders, according to a 2007 U.S. government report. The county government is considering a \$36 million mosque and community center. "When you look at the size of the
