No errors showed up throughout the entire process, but it stresses up the CPU and memory, so the overall performance of computer may be affected. By default, SSS Screen Video Maker saves the recordings to FLV file format, and stores the items in the same location where the application is saved. What's more, the tool offers support for audio recording options and automatically creates a folder with screenshots taken during the recording sessions. The screenshots are saved to PNG file format, by default. All in all, SSS Screen Video Maker offers very good video and image quality but it cannot compete with other powerful utilities on the market, as it lacks support for advanced functions, such as multiple recording modes and output formats, just to name a few suggestions.
