Is there a simple example of a definite integral that has no antiderivative or can be evaluated numerically? The factor in front of the integral in the answer by Chris W. should be 1/x A: Consider $$\int \frac{x+1}{x}dx$$ Here the $\frac 1 x$ is clearly antiderivative-free, but the numerator diverges, so you cannot perform a numerical integration. You can think of it as integration from 0 to ∞ of the diverging function $\frac {x+1} x$ /* * Generated by class-dump 3.3.4 (64 bit). * * class-dump is Copyright (C) 1997-1998, 2000-2001, 2004-2011 by Steve Nygard. */ #import "NSObject.h" #import "NSCopying-Protocol.h" @class NSMutableDictionary; @interface NSCollectionStore : NSObject { unsigned long long uniqueID; NSMutableDictionary *_mutableDictionary; } + (id)collectionStoreWithUniqueID:(unsigned long long)arg1; + (void)setDefaultCollectionStore:(id)arg1; - (BOOL)cont

I've read in Symfony 4.4 you can do this by using the function: Encore\Bundle\Form\Form::disableProdValidation() But I can't find it in Encore Prod function. How can I use this function? With cannabis legalization spreading in the U.S., the opioid crisis has started to worsen, Attorney General Jeff Sessions recently said. The popularity of CBD, a non-psychoactive cannabinoid, has grown, causing some people to mistakenly believe that it does not cause a high, or that it will not get them "high," he said.
