My question is how to create our own image handler in Windows Phone 7? What I need is: To add and edit Image files (jpg and png) When image is deleted, the same copy be saved to Files directory and also be saved in isolated storage directory. Image should be viewable from Gallery as well. A: Here is how I solved this problem: Use WriteableBitmapEx class in your Silverlight project. Use this class to show bitmap with image viewer control as well as to store bitmap images in both isolated storage or in files location. Add image handler methods in your application code. When you need to add an image then create new WriteableBitmapEx instance and call WriteAsync method for it. In your application you can use image handler methods (on application shutdown etc.) and then you can use same WriteableBitmapEx object to add new image. See WriteableBitmapEx. Ben Witty has been a member of the Norwich City family since its foundation in 1997 and has been a proud servant of the club for the past nine years. Ben began his career at Norwich City as a midfielder and represented the
