Explore an enriched, mysterious world:

Some places exist that have resisted the very angels and saints and have fallen into a nearly extinct state. In the Keep of the Elden Ring, a battle is being conducted between the angels and the underworld. In the town of Tobbles, powerful criminals attempt to take over the town. Along the road toward the city of Loam, a domineering priestess preaches the wisdom of the Angels. To the south, lies a large dungeon with a mystery surrounding it. It is said that the people who lived there are trapped in a dark curse. Dichronia, the technology center of the Elden, lies in the mountains. Beyond that, what lies beyond...? Regardless of how their stories began, the people of the world known as the Lands Between are looking to migrate to clean new lands. In the Lands Between, the person whose grace reaches the plane will assume leadership, and Tarnished will be the first Tarnished Queen.

Dream of Fantasy - Content in Boomsday Project, the foundation for upcoming Boomsday Project

Originally, Tarnished XIII had a severely limited number of available classes. By adding new classes and refining others, we gained expansion opportunities and experiences to create new features while maintaining the dream of content in Boomsday. We also added unique magic to the game to make it appeal to mainstream players. We reworked the main character design to ensure

Combined retrograde and antegrade recanalization for occluded cerebral arteries. Case report. A wide range of management options exists for symptomatic carotid occlusion. Reversal of flow in the intracranial internal carotid artery may be technically feasible; however, recanalization into the anterior cerebral circulation has previously been reported only in a single case. We present a 16-year-old male patient who presented with an acute generalized seizure (CNS), cerebrospinal fluid rhinorrhea, facial droop and diplopia as symptoms of right-sided carotid artery occlusion. Angiographic and operative findings confirmed a right internal carotid artery thrombosis. After endovascular thrombolysis, the patient became hemodynamically stable and was then successfully recanalized using intravenous and intracranial retrograde tirofiban and direct intraarterial tirofiban. To our knowledge, we report the first case of carotid occlusion reversal with intracranial antegrade tirofiban. This strategy potentially offers a convenient and straightforward solution for patients with acute ischemic symptoms.

Critiques of major American dictionaries on the comparative elements of English based on early American literature: "Thesaurus Research" 721 KB

Download Abstract This paper analyzes the features of early American literature by assessing the comparative elements of English as reported in English-American dictionaries published in England during the colonial period and during the period of the transition to American independence. Among the features examined are number of syllables, number of words, number of phrases, and number of lexemes. The data for this study comes from three prominent dictionaries, Hotten's Concise English Dictionary (1747, 2nd edition), New and Complete

English Dictionary (1767), and Webster's American Dictionary (1828). Each dictionary chronicles the functions and features of English in the contexts of both colonial and independence. There are also traceable changes in the structure of the the

Q: Counting how many of a object's objects occur in an array of arrays I have an array, that contains elements of each of the following types: { id: 1, name: "foo" } { id: 1, name: "bar" } { id: 1, name: "baz" } { id: 2, name: "foo" } { id: 2, name: "bar" } { id: 2, name: "zub" } { id: 2, name: "bat" } I want to be able to count how many objects are in the array at each index.

E.g., foo: 3, bar: 2, zub: 1, bat: 1. So: foo: 3
bar: 2 zub: 1 bat: 1 I am using lodash,
_.countBy() and it returns an object, rather
than an array. I tried: _.countBy(myArr,
function(el) { return el.name; }); But it only
counts the number of objects in the array. It's
like it only counts the number of objects of a
specific type. The array is like a dictionary of
objects, with id as the key and name as the
value. I need to be able to get a list of how
many of each specific object occurs in the
array. I could probably go through each object
and keep a running count myself, but I'm
thinking there is a built in function in lodash
that is doing it. A: Try this: var arr = [{id:1,name
:"foo"},{id:1,name:"bar"},{id:1,name:"b
