'Crooked Hillary' A-Hole Hacks On Mona Zima's Twitter Account Spread the love 24 "Crooked Hillary" A-hole Hillary Clinton got caught photoshopping her face on Mona Zima's body to make it look like she's had plastic surgery. Clinton was spotted at the Left Coast Classic doubleheader game, in her weird pussy bow hat, posing with Mona Zima at the Santa Cruz boardwalk. TRENDING: Obama Statement on Ginsburg Demands GOP Senate Honors Her Dying 'Instructions' and Put Off Vote on Supreme Court Nominee Until New President Sworn In During the photo shoot Clinton began talking to Mona Zima's Twitter account and started wildly photoshopping her face on to Zima's body. Zima noticed something was up and tweeted Trump supporters. "Those women at the Santa Cruz County Boardwalk, had some CREEPY teddy bear lookin' women on their ass. Likely WL campaign staff. What's with the teddy bear lookin' women on the ass in Santa Cruz?" Zima then directly tweeted Trump asking, "Are your hunny's telling you this is a Dem plant in their operation." After Trump supporters started tweeting back at Zima she deleted the tweets and blocked them all from following her. Zima also posted a video of the photoshopped image on her account. Zima posted this photo on her Twitter account: Hmm. Spencer Platt / Getty Images Hillary was trying to pass off an old man she befriended as a young woman. Hillary creepily tried to pass off an old man as a young woman in a bizarre photoshopped photo shoot on the boardwalk in Santa Cruz. The gal is nearing her 80's if she isn't already. And Hillary did this... Last year it was common knowledge that #CrookedHillary plotted to use her access to the DNC to manipulate the election. Just recently a book was published entitled Hillary's America: The Secret History of the Democratic Party and Hillary's campaign staff is using the sleazy tactics of womanizing and lying to continue their campaign of deception and misogyny. Intrinsic and extrinsic positional criteria for the clustering of proteins on the plasma membrane. In two experiments, we investigated the clustering of insulin receptor and its substrate proteins (insulin receptor substrate-1 and -2) on the plasma membrane of Chinese hamster ovary cells (CHO-K1) using fluorescence microscopy. In the first study, CHO-K1 cells were incubated at 37 degrees C on glass coverslips coated with concanavalin A (ConA) to obtain an insoluble matrix of glycosylated protein complexes. In the second study, a heterogeneous mixture of CHO-K1 cells were plated on glass coverslips and incubated at 37 degrees C. The images of the cells were acquired on a BX50 Olympus epifluorescence microscope using a cooled CCD camera controlled by a PC running Volocity, and the images were analyzed using Volocity software. We observed that the intrinsic and extrinsic positional criteria, i.e. the clustering of the insulin receptor and the distribution of bound insulin-receptor substrate complexes on the plasma membrane, correspond to the protein binding sites on the matrix obtained on ConA-coated glass coverslips. Insulin-receptor complexes bound to the matrix were detected using biotinylated insulin. We have demonstrated that the matrix binding sites are spatially heterogeneous on the plasma membrane of CHO-K1 cells.
