Getting Started With Photoshop Are you ready to see just how far Photoshop can stretch the boundaries of traditional graphics? To begin, let's take a closer look at Photoshop as a program to get you started. One area that helps Photoshop be a powerful graphics tool is that it comes with a comprehensive collection of applications (basically a mini suite of tools). Photoshop Elements, Photoshop Express and Photoshop CS5 Extended all include advanced tools for image editing (such as photo and video enhancement) that are more powerful and more easily mastered than those found in other applications. The following image, for example, was created in Photoshop CS5 Extended using a series of automated tools for greater efficiency. Because of this, it's an image that was created quickly and won't take hours to find and correct mistakes. When you open Photoshop, the program window includes a dockable window sidebar that contains various tools grouped together. This sidebar includes (from left to right): the History panel, the Layers panel, the Tools panel, the Adjustment panel, and the Shadows & Highlights panel. You can drag the various panels from the sidebar to any side of the Photoshop window for a more customized look and better organization. If you choose, you can also use the X or CMD+SPACE shortcuts for more easily locating certain panels. The image below shows the History panel's options for recovering image data and for creating a copy to the clipboard. The Layers panel contains a preview of the active layer (top image) and the layer below it (bottom image). This panel provides tools to rearrange and manipulate layers. The Layers panel in Photoshop contains a single pane. All of the tools here work with the active layer and the underlying layers. (More accurately, the Layers panel is the active panel.) You can move and manipulate layers in the following ways: • Double-click a layer thumbnail to move it. • Click the Convert Linked Layers option (top left in image below) to open a dialog box that enables you to change layer properties. • Click the Upper Layer option (top left in image below) to bring up the Auto Layer Mask option. • Click the Stroke Set (top right in image below) to enable you to apply image masks to the current layer. • Click the Layer Mask option (middle in image below) to get the 100 percent view of a layer's mask. •
