Tasks in Photoshop Photoshop enables users to perform many different kinds of work. Figure 9-2 shows an image of a cat and its eye overlaid on a photograph of the cat. To see the different layers, double-click the Layers palette icon and see Figure 9-3. Figure 9-2: An eye icon is superimposed on the cat's eye. To create a new layer and place it over the background, click the New Layer icon on the Layers palette, or use the keyboard shortcut . The picture in Figure 9-2 is composed of a background and two different layers. The eye icon is a layer that has been placed over the image. The eyelid icon is a new layer that overlays the eye icon and creates the illusion that the eye is open. Keep in mind that when you work in Photoshop, every image is represented by a layer. If you make changes to that layer, the changes remain in the layer forever. You can delete a layer, but you can't delete or move a layer back to the background. And you can't edit a layer after you've edited it. You are either working on one layer or on all the layers. To add a new layer, click the New Layer icon on the Layers palette (see the left side of Figure 9-3), or use the keyboard shortcut to open the New Layer dialog box. In the dialog box, choose a layer from the list, click OK, and then follow the directions in the Steps for Creating a New Layer sidebar, which appears at the end of this section. To delete a layer, double-click the layer in the Layers palette or select it with the Layers palette and press the Backspace key to remove it from the Layers palette. You can then rename the layer by double-clicking the layer name and typing a new name in the dialog box that opens. Click the eye icon to make it transparent, and then click the eye icon (located in the center of the top layer) again to make it opaque. You can also delete a layer and then add a new layer, or select the layer and press . This action combines the work you just performed with the new layer. Select a layer and then choose Edit

The Internet is a vast network of interconnected computers and computer networks around the world. The Internet is a public, self-sustaining facility that is accessible to millions of users and is used for many applications, including electronic commerce and communications. The Transmission Control Protocol/Internet Protocol (TCP/IP) suite is a set of protocols used for transferring information over the Internet. The most popular protocols in the suite are TCP and IP. TCP, which is the successor to the original stop-and-wait protocol, Sequential. Sockets, ARQ (addressed records), and NNTP, all provide bi-directional, stream-oriented flow of information, and are based on the concept of end-to-end flow control. Application programs running on one host request that a service be performed on a remote host. TCP ensures that the request is performed and returns an acknowledgment to the sender when the request is complete. In contrast to TCP, which is built around end-to-end acknowledgments, the protocols in the IP suite are based around datagrams, or discrete packets, that can be routed through the public Internet. A network node interfaces between TCP and IP. In the early days of network computing, IP was used for routing and transport, while TCP handled connection-oriented, sequenced, reliable, multiplexing, and flow control of network layer information. Currently, it is common for networks to be constructed with both TCP/IP and Internet Protocol (IP) as the basic communication protocols, and these protocols are often used in conjunction with one another in various applications. A number of companies offer applications that can run over networks using TCP/IP. These applications are known as Internet applications. Examples of Internet applications are the World Wide Web (WWW or Web), E-mail, file transfer, and remote terminal connections. Internet applications also include client-server applications and peer-to-peer applications. A World Wide Web server is a server software program that has the capability to serve web pages to other Internet servers and client computers that request the web pages. Servers that serve web pages are known as HTTP servers. HTTP is the protocol used for accessing and transferring information on the World Wide Web. The web page information includes text, images, audio, and video information. The collection of server programs and documents that make up the World Wide Web is known as the World Wide Web or WWW. HTTP is the most common protocol for transferring web pages on the Web. Typically, a web page

Do you know if there are any other similar sites that are in place for this organization? We are not aware of similar sites. [^1]: that is open for business right now and has been for several years now. I would be interested to hear what you think. A Google search shows many entries regarding this grand parade, starting with three in 1973, one in 1974, one in 1976, one in 1977, and other entries going back to 1968. Thank you for the information. I was born and raised in Philadelphia, and have always heard about this event. I didn't know that it was from 1974 until this year. I hope that my children have the opportunity to attend this event, one day. Nothing, to my knowledge, similar to this is in New Orleans. Back in the early 1970's there was a different kind of event featuring brass bands - that was more the "Dixieland" style. Here it is called "South Rampart Street Parade". I have to ask, where does it say in this story that this is the New Orleans Rambling Minstrels? And isn't this suppose to be a Peachtree parade? I stand corrected, it isn't the New Orleans Rambling Minstrels. The story tells of the Peachtree Parade (in Atlanta) and in this particular passage, a description of the band (which is one of the most celebrated in the United States): "Atlanta's most popular musical organization began as an all-male church group in
