Platform independence AutoCAD is available for Windows, macOS and Linux platforms. In recent years, Autodesk has expanded its offerings to the non-AutoCAD users, such as architects, engineers and students. Other products include Civil 3D, Inventor, Navisworks and Fusion 360. Language interpreters AutoCAD supports a number of language interpreters. AutoLISP and Visual LISP are native to AutoCAD and are similar to conventional programming languages. AutoLISP is an interpreter, which translates AutoCAD language commands into a conventional language, such as C, C++, Delphi, Visual Basic, Pascal or Java. Visual LISP is a compiler, which translates AutoCAD language commands into the language's native machine code. Both languages are commonly used for customizing and programming AutoCAD. Both languages support C++ libraries and objects (e.g. CDM and XData in AutoLISP and classes in Visual LISP). AutoCAD also supports scripting using Microsoft Visual Basic for Applications (VBA). VBA is a proprietary extension of Visual Basic, Microsoft's programming language. AutoLISP AutoLISP is a Macro-like language created by Autodesk in 1989. It was originally an extension for AutoCAD R14. As AutoCAD R15, it was the primary language for programmers. AutoLISP is used for customization, interaction with external programs and automation. AutoLISP code may be included in AutoCAD drawings. It can be used to interact with other programs using the External Interfaces, COM objects or Scripting Runtime objects. A big advantage is that AutoLISP does not have to be installed on the computer. Visual LISP Visual LISP is an interpreter-based programming language, which allows creation of software for AutoCAD by using the programming language's native characteristics, such as loops and if conditions. Visual LISP supports C++ libraries and objects. Visual LISP is a compiler, which translates AutoCAD language commands into the language's native machine code. It is the main programming language for customizing AutoCAD. Visual Basic for Applications (VBA) VBA is a proprietary extension of Visual Basic. It is an interpreted language, which supports.NET and COM objects. VBA is used to automate tasks such as customized field calculations, update fields, send emails, access data from databases af5dca3d97
