Business objects In AutoCAD a business object is a diagram, drawing, or object in the drawing with data attributes, which allows tracking the changes over time (a kind of versioning). Each business object contains information like names, attributes, or drawings. An example would be the information on a drawing, which could be the name, attribute, title, author, user, and notes. This data is stored within the object and when an object is changed, the information within the object gets updated automatically. Business objects are to be distinguished from design objects which are an optional part of the standard AutoCAD drawing, as well as from drawings or views, which are graphical surfaces. Integration with other software and web services AutoCAD connects to many other software programs and online services via its own Connect feature. Some of these are free to use and others are only available to paid users. See also List of AutoCAD plug-ins .NET Framework ADF AutoDesk's Autodesk Network for work collaboration. In AutoCAD 2023, you can view and annotate feedback on paper and PDFs. Instead of going through a cumbersome set of drawings, AutoCAD lets you annotate feedback on paper or PDFs, then import the annotations directly into your current drawing. Without any drawing steps, the Autodesk desktop application allows you to import annotations from a paper or PDF and to share them in the Inventor, AutoCAD Architecture, and Revit applications. You can import, annotate, and share annotations at the same time, either between different workspaces or the same workspace. A markup import process uses the same set of filters and annotations that you are already familiar with from the Import & Annotate tool in AutoCAD.
