Although the speed of sequencing has increased dramatically in the past decade, many of the computational tools required for HTS are relatively slow and therefore often require the use of shared HTS resources. The

Biostatistics and Bioinformatics Core (BSBC) provides statistical and bioinformatics services to investigators at PHS MLSP; facilitate the development and application of new statistical, bioinformatics, and computational tools; and provide software and computing services for the MLSP HTS Core for the pursuit of innovative projects. The Resource is staffed by a team of bioinformaticians, statisticians, and computer scientists who have a strong foundation in the fields of genetics, statistical analysis, computer science, and bioinformatics. The Core works closely with investigators to identify high-priority projects, design experiments, develop appropriate statistical approaches, and implement software for the analysis of high-throughput data, including the design and interpretation of genome-wide association studies (GWAS), resequencing analyses, copy number variation analysis, and functional genomics. Dr. William Dillman, the PI, who is an established R statistical computing expert, takes a leadership role in supporting the bioinformatics and statistical research by coordinating the activities of the Core and bringing statistical expertise to high-priority projects. The staff of the Core includes experts in statistical computing and in bioinformatics, with 6d1f23a050
