A copy of the license is available at www.gnu.org/copyleft/. On Debian GNU/Linux, all the tools required to build your own development environment are contained in the GNU menu package. A development environment is a collection of tools which allow for the building, testing, packaging, and distributing of a software program. The GNU menu package is the official distribution of development tools on the Debian GNU/Linux distribution. With the GNU menu and its package manager, apt-get, the user can install, remove, and update all the development tools they need to work on a single software program, and even multiple programs. Required Tools This package contains the development tools needed to build modules for the Mesa 3D Graphics Library. With Mesa, you can run OpenGL, GLU, and GLX programs on your Debian GNU/Linux system. To see a list of Mesa-related packages, run apt-cache search mesa Video Drivers Video drivers are the software that directly communicates with the video hardware. Driver-wise, there are a few video card drivers available in the Debian repositories, including the c6a93da74d
