Related WorkIn the NLA paper Asset Integrity , the authors disclose that checking file integrity is a major usability issue that has not been adequately addressed by previous studies. To address this problem, they use a controlled experiment with 20 participants. Additionally, they use the eye-tracking method to assess the participants' behavior in the experiment. However, they make a number of recommendations regarding what the websites could do to improve user experience. With the exception of the issue of downloading files, their suggestions are largely consistent with what we recommend in this article, e.g., use clean URLs when available, provide the checksums in the alt-attribute and provide a verification button for users to click on to verify the checksums.
